- ❑ Single click option to email multiple images and relevant information.

**Competitive edge - Exceed expectations of patients and referring physicians with MediView's robust information management system.**

## Lite

This basic version of MediView allows you to Acquire, Store, Process images in seconds using a choice of user defined report templates to suit individual reporting needs and style. Stores your patient details and reports on to a CD. Experts can now prepare their video presentations in seconds using an integrated suite of video editing tools.

## Advanced

In addition to all the powerful features of LITE, this enhanced version of MediView is a perfect solution for hospitals, which have to handle the imaging needs of a large group of patients. This helps you to sort patient findings based on diagnosis, procedures and referring physicians.

Powerful query tool allows you to analyze your patient information for making an informed diagnosis. Export your archives on to a CD or Zip drive along with the reports and images in structured form. Ideal for specialists who would like to prepare CDs for patients, referring doctors and for their personal academic archives. Experts can view the images from Multiple Viewing stations. Ability to build any number of userdefined report templates.
